

# Koltek Interlift 400

## Unique climbing trolley

The Interlift 400 is a unique type of monorail system with the ability to climb on a special track, even vertically. It can travel through curves with radius of 450 mm and can be erected almost anywhere. All you need is a place to fix the brackets. With the Interlift you can solve different access problems.

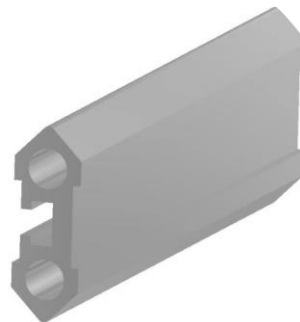

The Koltek® Interlift concept is based on friction between the special designed Interlift400 wheel system and Koltek® track profile KOT106.

- Weight approx. 50 Kg
- Travelling speed: 6 m/min
- Motor: 2 x 0,37KW motors, type SEW

### Working Load Limit (WLL)

- 600Kg Inclined to 15°
