

# Koltek Traversing Ladders

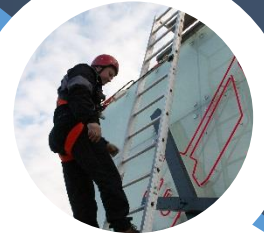

Manually operated or run by electric trolleys

Traversing Ladders with Fall Arrest may be manually operated or run by electric trolleys. When manually operated the ladder hanging from Koltek® aluminum tracks will slide easily in the direction it is pushed. Each ladder can be equipped with an operating brake\* to hold the ladder in the operators desired working position. The low end of ladder may have wheel against wall or be traversing on aluminum track. The ladder incorporates a safety rail for fall arrest trolley with automatic locking device in case of a fall. The trolley is sold separately.

- Contact a Koltek® representative for more info.

\*) The traversing ladder operating brake shall not be used as parking brake when the ladder is not in use. You must include a separate chain/steel rope with padlock or similar to secure the ladder when stored.
